The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 23-43 are rejected under 35 U.S.C. 102(e) as being anticipated by Yeh et al, US Patent 6,417,376 of effective date 10-9-1998). It discloses titanium oxide based catalysts for use in the oxidation of hydrocarbons such as O-xylene to phthalic anhydride. See col. 1.

Mesh like supports are coated with titanium oxide containing suspensions. See col. 3, line 52 to col. 4, line 65 particularly col. 4, lines 62-65 which state that surfactants may be present at a weight ratio to particles in the coating both of 0.1 to 10%. See also col. 7, line 47 to col. 8, line 40 and Ex. 1-4.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 23-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yeh et al, supra.

The reference has been explained above. The particular formula of surfactant recited in the instant claim is of course commonly known to be inclusive of all surfactants so that it really isn't necessary to consider said point further.

Because of the detailed discussion in the reference of the importance of the viscosity of the coating solution and the teaching of use of surfactants to modify it at col. 4 one of ordinary skill would have been motivated to modify the catalyst producing procedure of Ex. 1-4 by using a surfactant.
